Class 18 – Open Source/Licensing/More (Guest Speaker – Luis Villa, Tidelfit)

- Background
 - Please read the first two sections, on "Defaults and Overrides" and "Intellectual Property Law": <https://blueoakcouncil.org/primer> (Links to an external site.) This primer attempts to provide a quick primer to the IP and contract law that underlies open source licensing.
 - This document is an ongoing work in progress, so suggestions welcome at feedback@blueoakcouncil.org (which goes to Luis Villa and a few others).
- Actual Licenses
 - The first licenses listed in each group below are shorter, simpler, but less-used licenses. Optional links are to the licenses which are actually used in the wild- unfortunately, these are often much harder to read; please don't feel you need to read them unless you're curious.
 - Permissive Licenses
 - WTFPL: Open source can be at times humorous and at times angry. This license captures a bit of both: <http://wtfpl.net/> (Links to an external site.)
 - The Blue Oak Model License, 1.0.0: This is the "state of the art" in trying to give things away: <https://blueoakcouncil.org/license/1.0.0> (Links to an external site.)
 - (optional): Apache License, 2.0: This is one of the most widely-used legal documents in existence (not just most widely-used open source license). It was state of the art in the early-2000s, but now shows its age in some ways. <https://www.apache.org/licenses/LICENSE-2.0> (Links to an external site.)
 - Copyleft Licenses
 - Simple Public License: This is a simplified version of the GNU General Public License, v2 ("GPL"). GPL itself is not a well-drafted license, but is the original "copyleft" license and used by many key open source projects, including the Linux kernel: <https://opensource.org/licenses/Simple-2.0> (Links to an external site.)
 - (optional): Affero General Public License, 3.0: The most "advanced" and complex version of the GPL: <https://www.gnu.org/licenses/agpl-3.0.en.html> (Links to an external site.)
- Optional: Where Is Open Going?

- (optional): a blog post surveying some of the many ways in which "open" is winning, but also in the process getting more complicated: <https://michaelweinberg.org/blog/2021/10/06/next-wave-open/> (Links to an external site.)
- (optional): a case filed today, and good survey of the legal mechanics involved in enforcing open licensing: <https://sfconservancy.org/vizio>

Class 19 – Trademarks and Domains

- Trademark Basics, GIL 378-379
- Tiffany Inc. v. Ebay, GIL 388-393
- Domain Names (Introduction to Section), GIL 395
- Title 15, US Code, GIL 395-397
- Taubman Co v. Webfeats, GIL 397-402
- Uniform Domain Name Dispute Resolution Policy, GIL 403-405 – *skim*
- Curt Mfg. v. Sabin, GIL 406-409

Optional:

- James Ball, "Meet the seven people who hold the keys to worldwide internet security," The Guardian' <https://www.theguardian.com/technology/2014/feb/28/seven-people-keys-worldwide-internet-security-web> (Links to an external site.)
